Neptun kód: MNDJ3P Név: Bartók Patrik

Beadás verziószáma: 1.

#### Tisztelt Tanár Úr!

Tudom hogy hiányos a beadandó és ami megvan az sem működőképes, de sajnos ez még az előző beadandónál is sokkal nagyobb nehézséget okozott. Megpróbáltam fordítottan megcsinálni, és megírtam először a kódot, hátha az alapján könnyebben menne és megpróbáltam minden fellelhető segítséget felhasználni, de sajnos így is csak ez a hiányos és hibás verzió sikerült.

Csatolom a kódót is ami alapján megpróbáltam a specifikációt és az algoritmust megcsinálni.

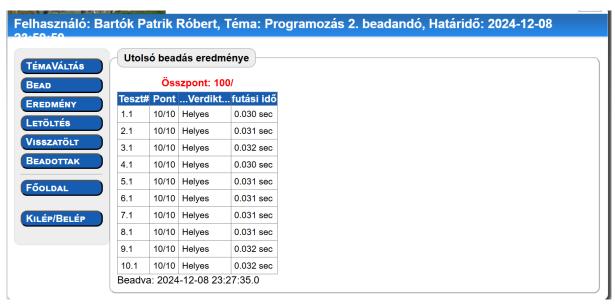

Nem tudom ez jó lehet-e egyáltalán kiindulópontnak, vagy teljesen újra kéne gondolnom az egészet.

### Feladat

A meteorológiai intézet az ország N településére adott M napos időjárás előrejelzést, az adott településen az adott napra várt legmagasabb hőmérsékletet.

Készíts programot, amely megadja azokat a településeket, amelyeken a legtöbbször fordul elő valamelyik napi előrejelzések maximuma!

# **Specifikáció**

```
